DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1,5-8,10-15,17,20-24 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1,5-8,10-15,17 and 20-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Marx et al. (Marx), US Patent No. 6,950,504.

Regarding claims 1,5-8,10-15,17 and 20-24, Marx discloses a method of message delivery from a wireless calling party terminal using a wireless communications network to a called party terminal, wherein the called party terminal has call waiting, the method comprising: determining that the called party terminal's line is busy; delivering a "call waiting no answer" message to the calling party terminal; prompting the calling party to leave a message for the called party; and storing the message from the calling party on the wireless communications network (see col. 9-10, lines 59-38 and col. 14,lines 21-51).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Levitan, US Pub. No. 2003/0229681, discloses a secure data broadcast network for traffic free internet access.

Ravindranath et al., US Pat. No. 6,987,756, discloses a multi-mode endpoint in a communication network system and methods thereof.
